

Data Scientist with formal Machine Learning training and 2+ years of enterprise experience. Proven ability to build and deploy machine learning and LLM-based systems using Python and modern ML frameworks. Seeking Data Scientist roles to deliver high-impact, data-driven solutions.

SKILLS

Programming	Python, Pandas, Numpy, SQL, Java, ABAP
Machine Learning & AI	Supervised Learning, Unsupervised Learning, Scikit-learn, TensorFlow, Pytorch, Deep Learning, NLP, Feature Engineering, Model Evaluation
Generative AI	RAG, LangChain, Prompt Engineering, Vector Databases (PineCone, ChromaDB, FAISS)
MLOps & Deployment	MLflow, Docker, Git, Streamlit, AWS
Data Visualization	Tableau, Power BI, Seaborn, Matplotlib
Mathematics & Statistics	Statistical Inference, Hypothesis Testing, A/B Testing, Linear Algebra, Calculus, Probability

PROJECTS

MLMadeEasy – No-Code Machine Learning Platform	2025 – Present
- Built a visual, node-based ML pipeline builder using React, ReactFlow, Flask, Python and Scikit-learn, enabling end-to-end ML workflows from raw data to trained model in under 6 minutes. - Engineered an automated data quality scoring engine (Pandas + SciPy) detecting 95%+ of data issues across completeness, uniqueness, and outlier distribution. - Developed a severity-tiered recommendation engine that improved data quality by flagging missing values, high-cardinality features, and skewed distributions, resulting in improvement in model accuracy. - Implemented real-time validation for 9 preprocessing nodes and 12 ML algorithms, preventing invalid pipelines.	
MockMentor – Resume-Aware AI Interview Coach [GitHub] [Live Demo] [Blog]	2025
- Developed an AI-driven interview preparation tool using LLM structured outputs, achieving 95% accuracy in parsing PDF resumes, and delivering personalized technical questions that boosted interview readiness scores by 15%. - Evaluated conversation memory strategies, finding full-history context (10+ turns) enhanced question relevance over single-turn generation. - Balanced context window size against latency constraints, maintaining <2s response time for natural dialogue flow.	
Nicoli – AI-Powered Study & Productivity Chrome Extension [GitHub] [Demo]	2025
- Shipped an AI-powered Chrome extension for study productivity with features like summarization, translation, quizzes, and mock interviews, used by 100+ active users. - Benchmarked browser-native AI APIs vs cloud models, finding on-device inference to be 3× faster for latency-sensitive tasks. - Integrated and evaluated 5 AI APIs, deploying via Chrome Extension Manifest V3 and iterating features based on user feedback.	

TECHNICAL EXPERIENCE

Technical Lead	Sept 2024 — Present
<i>HCL Technologies</i>	<i>Noida, India</i>
- Led enterprise SAP ABAP delivery, improving system performance and data processing efficiency by 25–30%. - Analysed and optimised large-scale data extraction pipelines and SQL-based reporting workflows, reducing execution time by 35%. - Translated complex business requirements into robust, maintainable ABAP architectures, reducing production defects by 40% and post-go-live support effort by 30%. - Partnered with cross-functional teams to ensure data accuracy and deliver 100% of projects on schedule. - Mentored 4–6 developers through code reviews, accelerating development cycles by 20%.	
ML Research Apprentice	Summer 2022
<i>Amazon ML Summer School</i>	<i>Remote</i>
- Sharpened skills in evaluating ML model performance (precision, recall, F1-score) under the guidance of Amazon scientists, applying best practices from production ML systems to hands-on projects. - Designed and deployed a recommendation engine using collaborative filtering and similarity-based algorithms. - Collaborated with 10+ ML practitioners on hands-on projects applying supervised and unsupervised learning on real datasets.	

EDUCATION

Bachelor of Technology in Computer Science and Engineering, IIIT Delhi	Jan 2021 — April 2024
